

AMENDMENTS TO THE SPECIFICATION:

Amend the specification as follows:

Delete the paragraph spanning lines 9-13 of page 10 and insert the following therefor:

The crystal may be of a 3A4 protein which is desirably truncated in its N-terminal region to delete the hydrophobic trans-membrane domain, and the region is replaced by a short (e.g. 8 to 20) amino acid sequence. For expression of the human 3A4 P450, we have used an N-terminal sequence MAYGTHSHGLFKKLG (SEQ ID NO:3) in place of the native N-terminal residues, which increases expression of the proteins in E. coli and increases solubility.
